Dear Deriv Hiring Team,

I am writing about the Applied AI Engineer role. I build LLM-enabled product workflows that have to ship: retrieval, tool use, and clear ownership between product UI and infra.

At OSBR I designed and prototyped a travel-client AI/RAG experience (design, mockups, frontend integration) and an internal Next.js AI chatbot, while continuing Figma-to-code client delivery on Nuxt and Vue. My personal system, log.exe, is an Agentic CMS on Cloudflare Workers, D1, and R2 with MCP and Ask/RAG doors; I am also shipping Kaeru, a Tauri desktop AI workspace, and running a small Hetzner/homelab stack for hands-on ops and local LLMs.

I care about production-safe releases: pragmatic model and tool choice, citation-minded retrieval, and tooling that makes agents faster without inventing permissions. I would like to discuss how I can help Deriv ship applied AI features with the same discipline.

Sincerely,
Amirah Nasihah
